

iLead 2.0 Participant Interface Spec

Oct 1, 2026 · @Manu Nair

Summary

This spec covers every screen a participant sees in iLead 2.0, from welcome to report, with text and voice input built into every live interaction. It keeps the current iLead structure the participant already understands (team board, actions panel, weekly loop), fixes the usability issues found in play, and adds screens for live interactions, NPC messages and gamification. Every label, image, colour and voice comes from the [GenieKreator configuration](#), so one interface serves every client version.

Design principles

1. **Decide, then do.** Strategic choices stay one click; critical workplace moments open a focused live screen.
2. **One screen, one job.** Live interactions take the full screen with only the context the participant needs, so the team board does not compete for attention.
3. **Text or voice, always.** Every live screen has a mic button and a text box; the participant can switch mid interaction.
4. **Show consequences, not scores.** During play the participant sees reactions, mood and KPI movement; skill ratings appear only in the report.
5. **Never lose work.** Autosave on every action and every draft; resume on any device.
6. **Accessible by default.** WCAG 2.2 AA, captions, keyboard play, reduced motion.

What changes from the current build

Area	Current iLead	iLead 2.0
Member selection	Hover, then click, often missed	Single click or tap, with a clear selected state
Style setting	Dropdown menus that shift while opening	Segmented control on each card, plus a list view
Actions	Pick from 4 options	Static picks, hybrid flows, and live screens
NPC voice	Templated text quotes	Persona replies in text and voice
Clock	Runs during popups and reading	Pauses during live interactions and modals

Area	Current iLead	iLead 2.0
Feedback	Big delta numbers on cards	Mood change, reply and short consequence summary
Gamification	Progress bar, leaderboard by conversions	Score, stars, streaks, badges, sponsor meter, tiers

Screen map

14 screens in three parts: a one time onboarding, a weekly loop around the main screen, and the close.

The main screen is the hub; every action returns to it

screen map · 14 screens, weekly loop

The inbox can open a live chat at any time; replying to an NPC costs no days but counts toward that NPC's state.

Main game screen

The main screen is the participant's office. It has 5 zones, laid out for a 1440 by 900 desktop and reflowing for tablet.

Zone	Position	Contents	Behaviour
HUD bar	Top, full width	Logo and title; Week x of 8 and Day; days left this week; real time clock (if on); Leadership Score; streak flame; settings and help	Clock shows a pause icon during live interactions; days left pulses when 1 day remains
Metrics strip	Under HUD	Team KPI dials (configurable, default Skill, Morale, Result, Trust); Team Pulse; target progress (for example \$30,000 of \$240,000); sponsor confidence meter	Each dial shows the latest change for 3 seconds, then a trend arrow
Team board	Centre	Stage header row with stage names and live counts; one column per stage, member cards stacked in each	Stage header turns amber when it is the bottleneck this week
Actions panel	Right	Team actions, then individual actions; each shows day cost, a live or static icon, cooldown or lock state	Disabled actions explain why on hover or tap ("Cooldown: 6 days left")
Inbox	Left drawer, collapsible	NPC chat messages, emails, news cards, sponsor notes; unread badges	New NPC message slides in with the portrait; urgent items pinned on top

Top level navigation (icons in HUD)

Item	Opens
Objective	Targets, win condition, scenario recap
Tutorial	Replayable guided tour and short video
Funnel	Stage by stage view: this week, all time, ideal
History	Timeline of every action and outcome, filterable by member

Item	Opens
Leaderboard	Cohort ranking, if switched on
Badges	Badge shelf, earned and locked
Help	Controls, voice tips, support contact

Onboarding

Onboarding takes about 5 minutes and ends with the participant meeting the team. The clock does not start until onboarding is complete.

#	Screen	Contents	Rules
1	Language and mode	Choose language; see play mode and expected time (for example "About 100 minutes, you can pause and resume")	Shown only if more than one language is configured
2	Welcome from the sponsor	Sponsor portrait, avatar video or letter; three tabs: Welcome, About the product, Your targets	Next is enabled after the video ends or after 10 seconds
3	Consent and data use	What is recorded (text, voice transcripts), why, retention, who sees the report	Must accept to use voice; text only play stays available if declined
4	Voice setup	Mic permission, 5 second test phrase with live transcript, speaker test with a sample NPC voice	Skip to text only at any time; can return from Settings
5	How to play	4 card carousel: the weekly loop, static vs live actions, the clock, how you are evaluated	Replayable from Tutorial
6	Meet the team	Team board with profiles to open; prompt to read at least 3	Proceed unlocks after 3 profiles, as today
7	Optional Week 0	One practice chat with a friendly NPC, not scored	Shown only if configured

Team member card and profile

Card on the team board (about 230 by 160 px)

Element	Detail
Portrait	Shows the current mood expression (neutral, happy, concerned, frustrated, thinking)
Name and role	Name; job title under it
Stat dials	Skill, Morale, Result; Trust as a small ring around the portrait. Hidden until the profile is first opened, as today
Style chip	This week's style, editable in style setting
Status tags	Training, Leave, Sick, New hire, Notice period; greyed card when unavailable
Signals	Speech bubble icon for an unread message; promise icon when a commitment is due this week
Selection	One click or tap selects; selected cards get a 2 px accent border and a check; a second click deselects

Profile panel (opens on click, 3 columns as today)

Column	Contents	New in 2.0
Profile	Portrait, stats, style, previous company, tenure, experience, skills, remarks	Trust, career goal (once revealed), relationships with other members
Your interactions	Timeline of every action, event and outcome with deltas	Transcripts and drafts from live interactions; promises made and their status
Take an action	Every individual action for this person	Live actions marked with a voice and text icon and their duration

Hidden concerns are never shown as text. Once a conversation surfaces one, a line appears in the profile ("Shared: feels his role is not what he was promised").

Weekly style setting

Opens at the start of every week, before any action. It replaces the current dropdowns, which shift as they open and caused wrong selections in play.

Element	Detail
Sponsor prompt	One line, as today ("To each his own..."), with a link to style definitions
Card view	Each card shows a 4 segment control under the stats (D, G, P, E with full names on hover); one tap sets the style
List view toggle	Table with one row per member: portrait, stats, last week's style and reaction, 4 radio buttons. Faster for keyboard and screen readers
Last week reference	Small tag on each card: last style and whether the reaction was positive or negative
Optional rationale	One line text or voice note per member ("Kent is new and unsure") that feeds the Intent vs action insight
Unavailable members	Still settable; note that the style applies when they return
Summary and confirm	Table of all 10 choices; Go back or Confirm, as today
Result	Team message from the sponsor plus mood changes on cards; deltas visible on tap

Static and hybrid action flow

Every action opens in a right side drawer, so the team board stays visible for selecting people.

1. **Choose the action** from the actions panel or a profile. The drawer shows the description, day cost and any limits ("up to 3 people", "needs a peer in the same role").
2. **Choose an option** for static actions (for example Team lunch or Team building). Options are radio cards with a short description.
3. **Select people** on the board with one click each. Ineligible cards are dimmed with the reason on hover ("Only member left in Qualify").

4. **Confirm.** A summary line states what will happen and the day cost ("Send Mandy, Justin and Peter to a 1 week workshop. 2 days.").
5. **Hybrid only:** after confirming, a live screen opens to communicate the decision (swap conversation, recognition note, exit conversation). The decision is locked; the conversation shapes the outcome.
6. **Outcome** appears in the notification panel (see Outcomes).

Prerequisite nudges: if the engine has a prerequisite (Assess before Swap), the drawer shows a soft warning with a one click shortcut ("You have not assessed Justin for Conversion. Assess first, 1 day?"). The participant can still proceed, and the penalty applies. Authors can switch nudges off, since skipping the step is part of what the simulation teaches.

Live interaction screens

All 7 formats share one shell, so participants learn it once.

Shared shell

Zone	Contents
Header	Format and person ("1:1 with Kent Goldberg"), timer with the pause state, End button
Brief card (left, collapsible)	Your goal for this moment, what you know about the person, their current mood, open promises, your declared style for them
Stage (centre)	The format specific workspace (table below)
Input bar (bottom)	Text box, mic button, send; mode switch at any time
Hint button	Optional, if the author allows hints; one coaching tip per interaction

Voice controls

Control	Behaviour
Mic modes	Push to talk (default) or open mic with automatic turn detection
Live transcript	Words appear as spoken; the participant can edit before sending in email, chat and plan formats

Control	Behaviour
NPC voice	Plays with captions on; replay button on every NPC turn
Interrupt	Speaking while the NPC talks stops the NPC, as in a real conversation
Fallback	If the mic fails or audio is poor, a banner offers text and keeps the conversation intact

Per format workspace

Format	Workspace	Ends when	Special elements
Email composer	To, CC, subject, body; recipient chips from the team	Send	Dictate button per field; replies arrive in the inbox over the next sim day
Chat	Thread view like Teams or Slack	Participant closes or NPC signs off	Voice notes; typing indicator for NPC
1:1 AI RolePlay	NPC portrait or animated avatar, mood ring, transcript under it	Time limit, End button, or natural close	Mood ring shifts subtly with the conversation, no scores shown
Team meeting	Grid of attendee portraits, active speaker highlight, agenda box	Time limit or End	Raise hand from quiet NPCs; participant can call on someone by name
Sponsor briefing	Sponsor avatar; optional 3 bullet notes area the participant fills first	Sponsor ends Q&A	Funnel and KPI snapshot pinned for reference
Interview	Candidate portrait, CV card, question notes	Time limit or End	Compare view after 2 interviews, then Hire or Pass
Written plan	Form: goals, measures, owner, due day, support needed	Submit, followed by a 2 minute check in	Fields accept dictation; the NPC comments on the plan in the check in

After any live screen ends, a 3 second transition shows "The team is reacting" while evaluation runs, then returns to the main screen with the outcome.

Outcomes, events and interrupts

Outcome panel (top of the main screen, as today, redesigned)

Element	Detail
Headline	What happened, in one line ("Kent opened up about what is bothering him")
Reply	The NPC's reply in their voice, with replay; avatars of everyone affected, tap to read each reaction
Movement	Mood change on each affected card plus KPI arrows; exact numbers on tap, not as large overlays
Ripples	"Jack noticed" style line when a bystander reacted
What changed	Up to 2 lines of consequence ("Kent's leads will flow to Beth again"); never the rubric band name
History link	Opens the full entry in History

Events and interrupts

Type	Delivery	Participant controls
News bulletin	Card carousel at week start with illustration; See impact on each card	Next, previous, Proceed
NPC message	Chat in the inbox with portrait and preview	Reply now (opens chat), later, or ignore; due day shown
Email	Inbox item with a reply button	Reply opens the email composer
Modal interrupt	Centre dialog for leave, complaints, urgent sponsor notes	Acknowledge, or respond if the event needs a reply
Sponsor call	Incoming call banner for escalations	Take the call (opens briefing) or schedule within 1 day

The clock pauses while any modal or event card is open.

Week end, gamification and end screen

Week end sequence

1. End of week banner with Proceed.

2. Weekly report: funnel this week vs ideal, KPI start, change and end, stars earned (1 to 3), streak status, sponsor confidence change.
3. Badge popups for any badge earned this week, one at a time, skippable.
4. Unlock offer if sponsor confidence crossed a threshold (choose one reward).
5. Next week news bulletin, then style setting.

Gamification surfaces

Element	Where it lives	Interaction
Leadership Score	HUD, with a tooltip that explains the 3 inputs	Opens a breakdown of Business, People, Leadership
Stars	Weekly report and History	Hover shows the week score
Streak flame	HUD	Counter with next bonus
Badges	Popup when earned; shelf from HUD	Locked badges show the hint, not the rule
Sponsor meter	Metrics strip	Tap shows recent causes
Leaderboard	HUD icon, refreshes live	Top 10 plus own rank; anonymous if configured

End screen

Element	Detail
Headline	Tier earned (Bronze to Platinum) and Leadership Score
Results row	Target achieved, conversions, final Team Skill, Morale, Result, Trust
Highlights	3 best moments and 1 moment to revisit, each one line with the week
Badges	All earned badges
Report	View report in app, download PDF, email to self
Reflection	Optional 2 question reflection (text or voice) that feeds the development plan
Feedback	1 to 5 rating and comment on the experience

States, accessibility and devices

System states every screen must handle

State	What the participant sees
Evaluating	"The team is reacting" transition, under 5 seconds target; skeleton outcome panel if longer
NPC slow to reply	Typing or thinking indicator; after 8 seconds, a retry option
Mic blocked	Banner explaining how to allow the mic, plus Continue in text
Poor audio	"We did not catch that" with the partial transcript to edit or resend
Connection lost	Draft kept locally; actions queue and retry; clock paused
Session resumed	Recap card: week, day, last 3 outcomes, open messages
Out of days	Actions panel locks; End week is the only primary button
Time limit reached	Gentle 2 minute warning, then end screen; live interaction in progress is allowed to finish
Inappropriate input	NPC responds in role; repeated abuse ends the interaction with a neutral message and is logged

Accessibility (target: [WCAG 2.2 AA](#))

- Captions on every NPC voice line and video; transcripts saved in History.
- Full keyboard play: tab order follows HUD, team board, actions, inbox; shortcut keys for mic and send.
- Screen reader labels on every card, dial and chip; list view for style setting.
- Colour is never the only signal: moods also change the portrait and label; deltas carry + and - signs.
- Reduced motion setting turns off card overlays, celebrations and pulsing.
- Text size up to 200% without loss of content.
- Voice is never required: every live interaction can be completed in text.

Devices

Device	Support
Desktop and laptop, 1280 px and wider	Full experience
Tablet, landscape	Full experience; team board scrolls by stage
Mobile	Lite mode and resume only; live interactions in chat and voice work, team board becomes a list

Fixes from the current build and themable elements

Issues seen in play, and the fix

Issue in current iLead	Fix in 2.0
Style dropdowns shift while opening, causing wrong picks	Segmented control and list view
Member selection needs hover then click	Single click select with a clear selected state
Clock keeps running during popups and tour steps	Clock pauses in tours, modals, events and live screens
Tour popovers reappear on top of dialogs	Tour runs once per area, never over an open dialog
Large red and green overlays hide faces and stats	Mood change and small deltas; details on tap
"No impact on result" labels while morale still drops	Labels removed; See impact always shows true effects
Same quote for every trainee	Persona replies per NPC
Action panel clicks sometimes open a member profile instead	Separate hit areas; drawer opens beside the board, not over it
Report download opens a separate file with no in app view	In app report plus PDF and email

Themable from GenieKreator, with no design work

Element	Source setting
Logos, colours, fonts, light and dark	Branding

Element	Source setting
Backgrounds, illustrations, icons	Images
NPC portraits, expressions, avatars, voices	NPCs
Stage names, KPI names, time unit label	Process, targets, time
Action names, icons, descriptions	Actions
Badge names, icons, tier names	Gamification
All copy, in every configured language	Language
